PATROCÍNIO

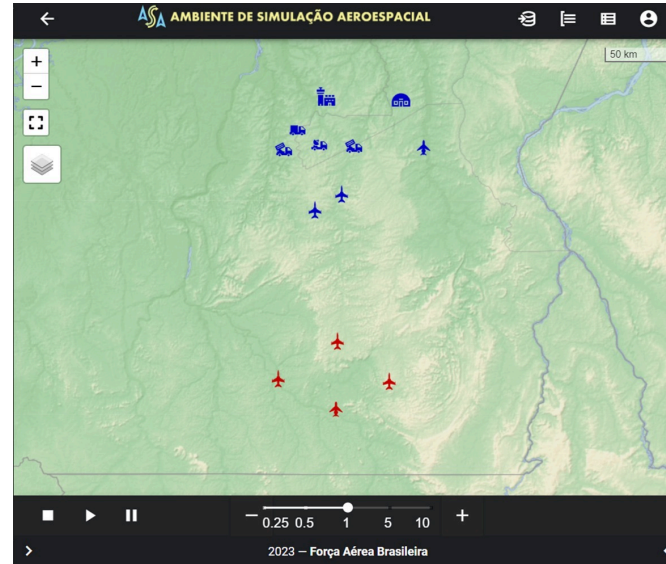

Introduction

- Forecasting battle outcomes: a longstanding military requirement
- 1950s: US Army adopts mainframe computers for data analysis and battlefield simulations
- Accelerated time simulation: a superior simulation method that saves time
- Faster-than-real-time simulations enable armed forces to:
 - Choose appropriate actions
 - Create tactics and doctrines
 - Train decision-makers through war games
 - Assess new acquisitions
 - Innovate new technologies
- Availability of several commercial solutions for accelerated time simulations
- Armed forces exploring in-house development of simulation tools

Aerospace Simulation Environment

- Aerospace Simulation Environment or *Ambiente de Simulação Aeroespacial (ASA) in Portuguese*
- **Custom-made in C++** for advanced programming flexibility
- **High-fidelity representation** for accurate scenario reproduction
- Supported by the **Brazilian Air Force**
- Dedicated to **modeling and simulation of military operational scenarios**

Simulation as a Service

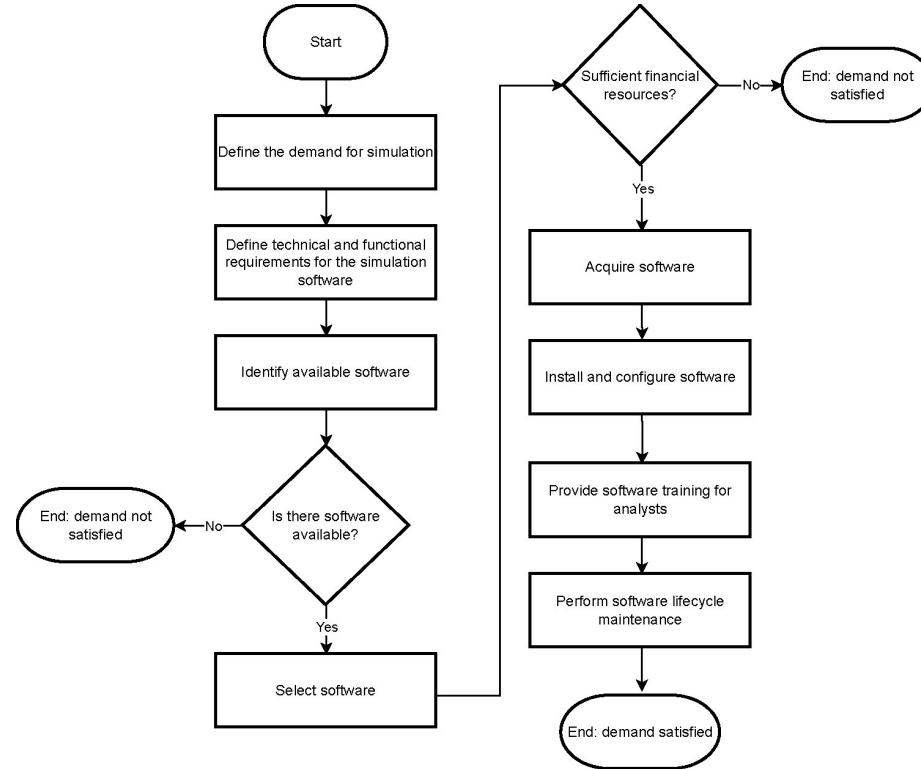

- ASA provides defense scenario simulations via its cloud-based service, ASA-SimaaS
- ASA-SimaaS promotes collaboration between government entities, academia, and Brazilian Defense Industrial Base (BID) entities
- This work presents ASA-SimaaS as an instrument to advancing FAB's digital transformation
- Offers customized cloud-based simulation services for defense scenarios

Before the Digital Transformation

- Simulation initiatives within the FAB are managed in a decentralized manner
- Decentralized acquisition leads to significant initial, training, and maintenance costs
- Procurement of simulation software often results in resource constraints
- Challenges arise in managing license renewals and updates
- ASA-SimaaS offers a centralized, cloud-based solution
- Accessible to all FAB organizations
- Reduces complications of traditional software maintenance and acquisition

Effectiveness and Efficiency Indicators

Effectiveness indicator

$$Eff_s = \frac{NSS}{NSD}$$

Efficiency indicator

$$Eff_y = \frac{TVI}{NSS}$$

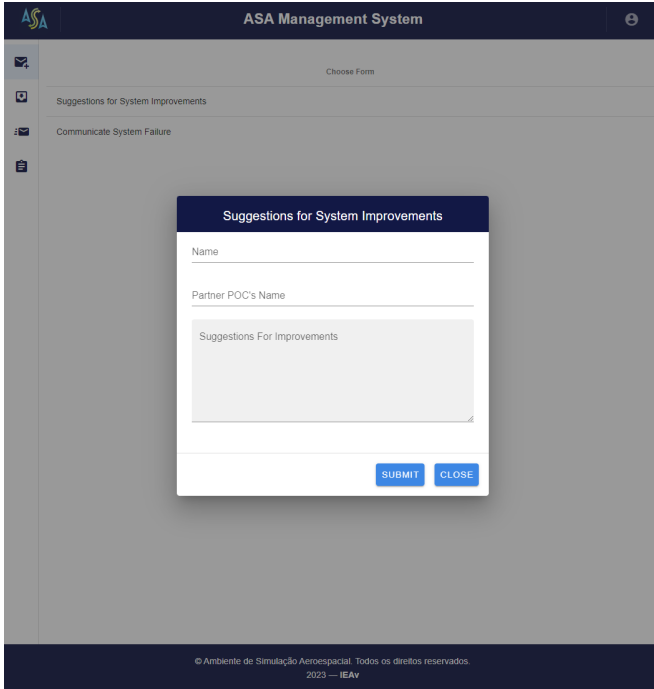

NSS: number of scenarios simulated

NSD: the number of scenarios demanded

TVI: the total value invested in the acquisition and maintenance of the system in a given period

ASA Management System

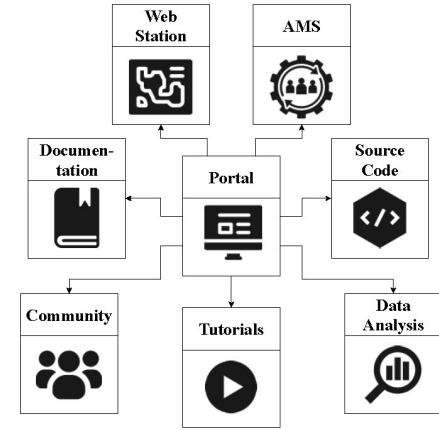

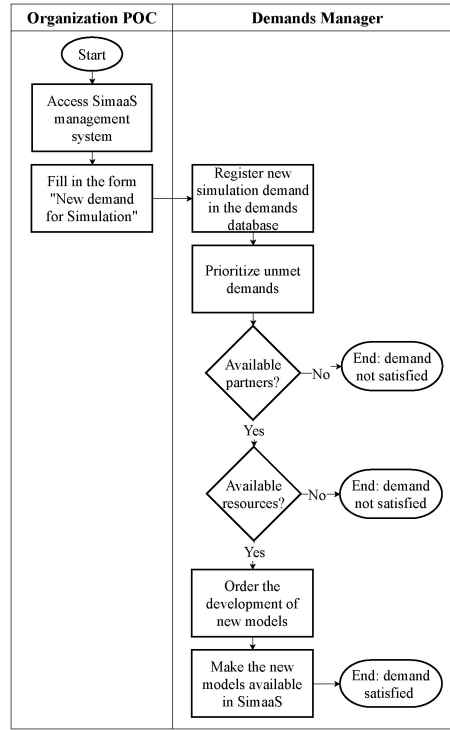

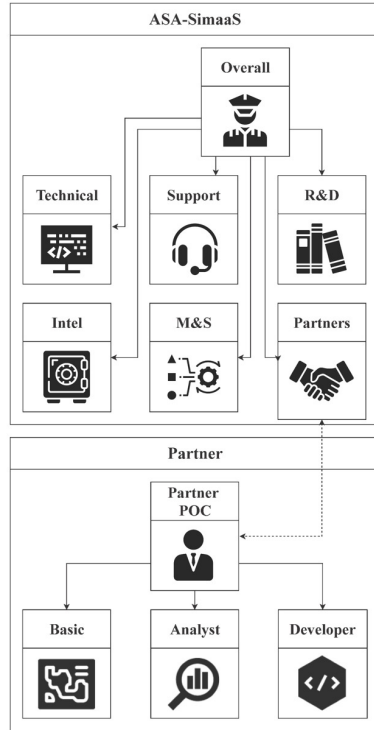

The screenshot displays the ASA Management System interface. At the top, the title 'ASA Management System' is visible. Below the title, there is a 'Choose Form' section with two options: 'Suggestions for System Improvements' and 'Communicate System Failure'. The 'Suggestions for System Improvements' form is open, showing a title bar, a 'Name' field, a 'Partner POC's Name' field, and a large text area for 'Suggestions For Improvements'. At the bottom of the form are 'SUBMIT' and 'CLOSE' buttons. The footer of the interface contains the text: '© Ambiente de Simulação Aeroespacial. Todos os direitos reservados. 2023 — IEAv'.

- ASA-SimaaS incorporates a straightforward management system, enhancing communication between users and service managers
- Systematically organizes and prioritizes FAB's simulation needs, preventing superfluous acquisitions and serving more customers
- AMS, a key web application in ASA-SimaaS, simplifies assessment, prioritization, and tracking of update and feature requests
- Ensures rapid and efficient handling of service access requests, overseeing the full ASA service lifecycle
- Centralizes coordination of simulation-related initiatives and needs across FAB, fostering collaborative and efficient organizational simulation needs management

ASA Management System

Advancing Digital Transformation

- **Chief of Staff**
 - Supports Simulation-Based Acquisition (SBA) analyses
 - Enables informed decision-making on acquisitions and future capabilities
- **Operational Commands**
 - Aids in fine-tuning doctrines and tactics
 - Helps in selecting effective Courses of Action (COA)
- **Command and Staff College**
 - Upgrades war game activities
 - Enhances strategic thinking and decision-making training
- **Research and Development**
 - Facilitates the development of AI algorithms
 - Offers a robust environment for testing AI solutions
- **Benefits**
 - Promotes collaboration
 - Increases efficiency and effectiveness
 - Boosts the readiness and success
- **Technology**
 - Cloud-based web service
 - 24/7 sophisticated IT infrastructure
 - Allows complex simulations without high-end PCs

Conclusions and Future Work

- **ASA-SimaaS: Streamlining Digital Transformation**
 - Enhancing communication: seamless interaction between users and service managers
 - Integral role in decision-making: tactical, operational, and strategic levels
- **Future Enhancements**
 - AI integration: smarter, adaptable simulations
 - Real-time collaboration tools: encouraging collective, data-driven decisions
 - VR & AR integration: immersive, realistic defense scenario simulations
- **Critical Success Factors**
 - Scalability and agility to meet evolving defense needs
- **Overall Impact**
 - Optimized resource allocation
 - Streamlined decision-making processes
 - Enhanced mission support
 - Supporting Brazil in maintaining a robust and streamlined defense posture
